Roundabout LED Enhanced Signs

The 48 x 24 in. sign features three LED-enhanced arrows; each arrow has ten white LED flashers. During the lighting chase sequence, each arrow is illuminated separately, and progression follows the direction of the arrows and repeats until the configured activation time expires. Separate signs operate independently of each other.

The LaneLight control cabinet designed specifically for this sign contains a power converter, an LED Sequencer, and a radar sensor unit. The radar sensor, mounted inside the control cabinet door, detects the presence of oncoming traffic and sends an activation signal to the LED Sequencer, which activates the LEDs on the sign.

SPECIFICATIONS

Power	Solar or AC Options
Operation	Pedestrian Activated / 24-7 / 365 Day Scheduler
Integration	Easy Integration with a LaneLight In Road System
Connection	Hardwired or RF Wireless Options
Mounting	Universal Mounting Bracket
Signs	
Dimensions	30 x 36 in. or 36 x 48 in.
Color	Diamond Grade Yellow, Red, Green
Dynamics	Pulsed Flash
LEDs	
LED Size	1 in. [25mm]
LED Number	Depends on the sign shape
LED Brightness	48 lm per LED
